

Gourd Mounting Arms

Straight Gourd Mounting arms work by mounting the gourd in the same direction as the aluminum angle arm on the Super System 24 or AAA-16

90 Degree Gourd Mounting Arms mount your gourd on a 90 degree to the aluminum angle arm.

You can mount the gourd arm on either side of the angle arm. Simply align the GMA hole to one of the pre punched holes on the arm. Insert the bolt from the back, thread on the nut and tighten. Place gourd on arm and insert hitch pin.

For larger gourds you can change the spacing by drilling a 1/4" inch hole in the angle and attach your gourd mounting arm. For S&K Whistle Gourds use 2 vertical 90's.

Vertical Mounting Arms are ideal for Super Gourds, and natural gourds, and horizontal mounting arms are ideal for Troyer Horizontal Gourd and S & K gourds.

Vertical Straight**

Gourd Mounting Arms

Troyer Horizontal Gourd mounted to GMA.

Some gourds may need their mounting holes enlarged to 3/8"

Notice the direction of the GMA when using Troyer Horizontal gourds.

To keep gourds from moving place a piece of tubing on the arms between gourd and pin.

ComBo gourds can be hung using either Vertical or Horizontal GMA's
