

Owl Guards

Owl guards are designed to be used in conjunction with Super Gourds and the following gourd racks sold under the names of: Deluxe (Round and Square pole), Expandable, Standard, and 4 Gourd Rack units.

Each owl guard consists of 1 - 1/4" solid aluminum guard arm (A), 1 fold over bracket (B), and 2 each #8 x 3/4" stainless machine bolts and 2 #8 nuts (C).

Step 1) Place owl guard on the vertical arm as shown in step 1. Make sure arm of owl guard is inside the gourd arm hitch pin.

Step 2) Insert the fold over bracket over the owl guard and vertical arm facing the bracket towards the ground.

Step 3) Insert your 2 #8 x 3/4" bolts from the outside in, with the nuts facing the gourd. Measure from your gourd to the arm. You will want approximately 7-8" from the gourd and tighten the nuts.

When you do a nest check you can raise your guard by lifting the right side of the arm over the gourd.

Owl Gourds work best with Super Gourds. The size and placement of the entrance hole aligns perfectly with owl guard. When using other gourds you may need to adjust the width of the arms in front of the gourd.
